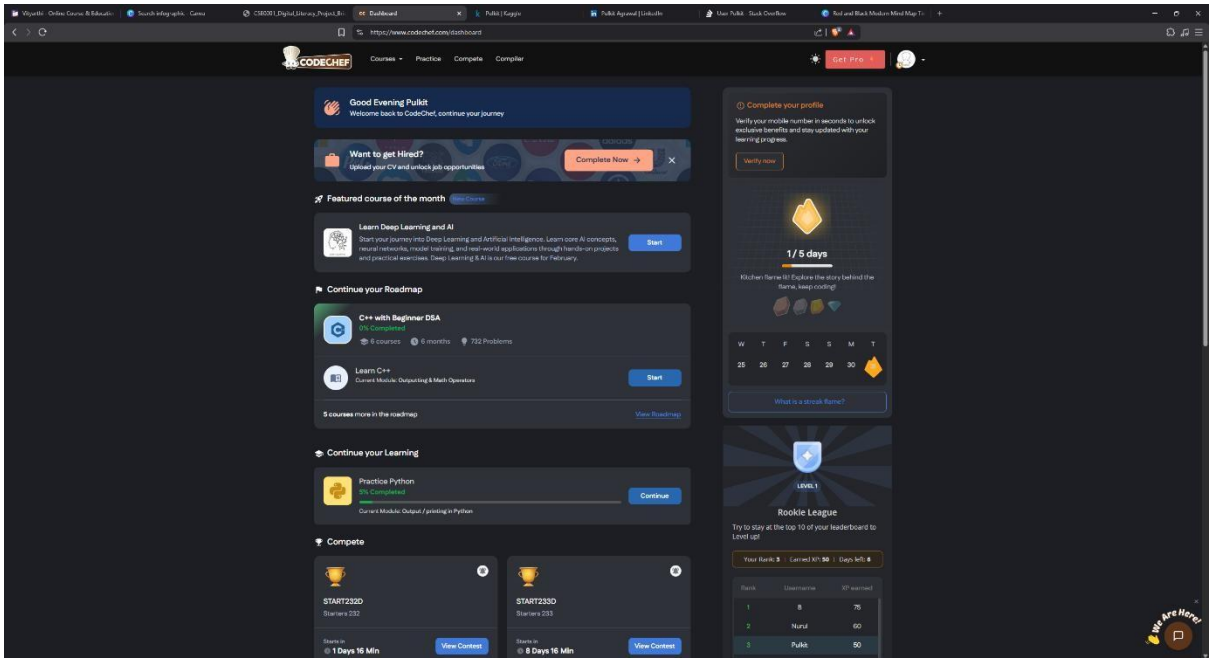
Google Workspace Collaboration

Name – Pulkit Agrawal

Reg Number – 25MIP10075

For this task, I used the CodeChef platform to improve my coding skills. I created an account and successfully completed a beginner-level programming challenge. This helped me understand basic problem-solving techniques, logic building, and how to write efficient code. Practicing on CodeChef also improved my confidence in programming and gave me exposure to real-world coding questions.

In addition, I created a Google Form titled “Digital Literacy Awareness Quiz” for my classmates. The form included five questions, combining multiple-choice and short-answer formats to test basic digital knowledge. I also linked the responses to a Google Sheet to analyze the data efficiently.

These tools are very helpful for my academic growth. Coding platforms like CodeChef enhance logical thinking and prepare me for technical interviews, while Google Forms and Sheets improve my ability to collect, organize, and analyze data. Overall, this project strengthened both my technical and digital literacy


skills, which are essential for my future studies and career.
